PROFESSIONAL SUMMARY

Technical Project Manager and Full-Stack Developer with 3.5+ years building and delivering scalable web, software, and integration products across MERN, MEAN, PHP, and AWS. Currently interim Head of Operations at INFOTEK Solutions — owning end-to-end delivery for 17 active client accounts across 8+ industry verticals (B2B manufacturing, automotive, EPC/infrastructure, logistics & 3PL, HR-tech, EdTech/IT hardware, real estate, and travel) while leading a cross-functional team of 8+ engineers. Hands-on across full-stack development, data engineering (SQL Server replication & change tracking), systems integration (Tally ERP, Aras PLM, WhatsApp Business API), RPA (UiPath), and SEO/GEO. Having delivered 13+ products to production, I run the full loop — gathering requirements, delegating modules across the team, enforcing standards (RBAC / super-admin, input validation, audit), reviewing code, and shipping multi-tenant SaaS from BRD to client handover.

PROFESSIONAL EXPERIENCE

Project Manager & Full-Stack Developer → Interim Head of Operations

Oct 2024 – Present

INFOTEK Solutions (INFOTEK India)

Gurugram / Vadodara, IN

- **Operational leadership:** across 17 active client accounts in 8+ verticals — accountable for delivery, quality, margins, and client relationships as interim head of operations.
- **Multi-discipline delivery:** coordinate concurrent workstreams across web & custom software, digital marketing (Meta/Google/LinkedIn paid + SEO/organic), graphic design, RPA automation, and cloud/hosting.
- **Team & execution:** lead a cross-functional team of 8+ engineers — sprint planning, code review, delegation, and on-time delivery across concurrent engagements.
- **Client ownership:** primary point of contact for all accounts — translating business requirements into scalable technical solutions and managing scope, commercials, and stakeholders end to end.
- **Delivery loop:** gather client requirements, break scope into modules and delegate to engineers, then enforce cross-cutting standards (super-admin / RBAC, input validation, audit trails), review code, and drive each build to production.
- **Hands-on engineering:** design, build, and review full-stack apps on MERN/MEAN/PHP/AWS; deliver data-engineering, ERP/API integration, and automation solutions from requirement analysis to deployment.
- **AI-accelerated delivery:** embedded AI-assisted development across the team to compress build cycles, automate repetitive tasks, and raise per-engineer throughput.

Full-Stack Developer — QuickMed Staffing (US Client, Independent Contract)

Jan 2024 – Oct 2024

Independent Contract · Remote

Client: USA

- sole developer for a US healthcare staffing client — designed, built, and deployed a recruitment portal end to end (Angular UI, Node.js services, MongoDB), on AWS (EC2, IAM, security groups), owning direct client communication across US time zones.

Full-Stack Developer (MERN Stack)

Jan 2024 – Jul 2024

Rishabh Software

Vadodara, IN

- built and maintained MERN web applications and RESTful APIs with a focus on performance; collaborated via Git-based code-review workflows.

Project Trainee (.NET)

Aug 2022 – Apr 2023

Paul Mason Consulting Retail

Vadodara, IN

- developed WPF and console applications in .NET using MVVM; performed unit testing, debugging, and code reviews.

KEY PROJECTS

B2B Procurement / eRFQ SaaS Platforms — two manufacturing clients *React/Vite · Node · MongoDB · Python (OCR) · Tally API · HeroUI*

- Led requirements, module delegation and delivery of multi-tenant eRFQ portals (requisition → supplier quotes → comparison → award) with company-wise RBAC, a Python OCR pipeline that auto-extracts line items, and a pull-API integration with Tally ERP; shipped across multiple production versions.

Real-Time HRMS Data Replication & Operations Dashboards *MS SQL Server · Change Tracking / CDC · Node · Python*

- Engineered live replication of a production HRMS across two physical servers using SQL Server Change Tracking, enabling real-time operational dashboards and automated alerting on data anomalies.

HR Onboarding & Document-Automation Platform *MERN · PDF / Template engine*

- Built an onboarding & compliance system generating offer letters, joining forms, service agreements and appointment letters as locked PDFs from exact corporate letterhead templates, with dynamic forms and granular per-HR role-based access.

Inventory / Warehouse Management System — 3PL logistics *React · Node · MongoDB*

- Delivered a multi-tenant IMS for a 3PL provider — QR-code rack storage, FIFO stock movement, and separated customer / accountant / super-admin logins scoping each company to its own data.

Real Estate CRM & Reusable Bulk-Mail Product *React / Next · Node · MongoDB · Nodemailer*

- Delivered a real-estate CRM (lead capture, pipeline, follow-ups) plus a reusable bulk-mail product — built once and redeployed for three clients across real estate, travel and manufacturing — generating individualized campaigns per recipient.

Support Ticketing System — IT / EdTech hardware firm *React · Node · MySQL*

- Built an internal support/ticketing platform with ticket routing, status workflows, super-admin controls and per-role access; owned requirements and delegated modules across the team.

Tally ERP Customization & Integration — manufacturing group *Tally TDL · REST API · Node*

- Built TDL modules (a scheduled payment-advice auto-emailer across multiple companies) and a Tally GET API exposing sales, purchase and inventory data to external software.

Face-Recognition Attendance System *Python (OpenCV / face-recognition) · Node · React*

- Built a facial-recognition attendance system integrated with the HRMS — automated employee check-in/out from live camera capture, matching faces against enrolled staff and syncing attendance records in real time.

WhatsApp API Gateway, Aras PLM Deployment & Visa Tracker *Docker · Windows Server / IIS / SQL 2022 · React · Node*

- Self-hosted a WhatsApp Business API gateway (Evolution API) with email→WhatsApp middleware; deployed Aras Innovator PLM on Windows Server; and built a visa-application tracker for a corporate-travel client.

ALSO DELIVERED

- Contractual Workforce Management System (CWMS) for managing contract-workforce operations and compliance; and a label-generation application for a 3PL provider.
- CRM platform with a full redesign, plus a project costing module — corporate travel agency.
- Led vendor evaluation & selection for a logistics operations platform (a Cargoes Flow alternative), matching client requirements to budget.

TECHNICAL SKILLS & COMPETENCIES

Languages: JavaScript, TypeScript, Python, SQL, C#, PHP, HTML, CSS, XAML, jQuery

Frameworks & UI: React.js, Node.js, Express.js, Angular, .NET Core / Framework, HeroUI, Vite, Tailwind CSS

Databases & Data Eng.: MongoDB, MySQL, MS SQL Server, Change Tracking / CDC, DB replication, OCR document pipelines

Cloud, DevOps & Infra: AWS (EC2, IAM, Security Groups), Docker, Windows Server, IIS, Git / GitHub, cloud & hosting management

Integration & Automation: Tally ERP (TDL + API), Aras Innovator PLM, UiPath RPA, WhatsApp Business API (Evolution), Microsoft Graph, REST API design

Marketing Engineering: SEO / AEO / GEO, keyword research, sitemap & schema automation, Open Graph / meta optimization

Project & Operations: Agile / Scrum, BRD & SOW analysis, multi-account portfolio delivery, RBAC / multi-tenant design, scope & margin management, team leadership (8+), AI-assisted development

EDUCATION

B.E. in Computer Engineering — Vadodara Institute of Engineering	2019 – 2023 · CGPA 7.72
H.S.C. (GHSEB) — Shree Saraswati Vidhyalaya (APS)	2017 – 2019 · 68%
S.S.C. (GSEB) — Gayatri Vidhyalaya	2016 – 2017 · 74%

ACHIEVEMENTS & CERTIFICATIONS

- Arduino Programmer & Lead Mechanical Engineer — VIER Robocon Team (DD-Robocon, Vadodara), 2020–2022.
- Arduino Programmer — Smart India Hackathon, Ongole, Aug 2022.
- Runner-Up — MSU Footprint (MonoChrome, Technokick) and Cognizance technical events.
